

Application for Graduate Technical Business Analyst

Dear Acturis Recruitment Team,

I am applying for the Graduate Technical Business Analyst role in Birmingham. Turning complex client needs into clear technical specifications is the kind of work I have gravitated towards, and I am available to start before the end of 2026.

My background combines analytical training with hands-on technical delivery. I hold an MSc in Information Security from Royal Holloway, awarded with Merit, and a BCA in computer applications, along with CompTIA Security+ and ISC2 Certified in Cybersecurity. The MSc required me to work through security architecture and business process problems in structured terms, which is closer to specification work than pure development.

The clearest example of specification work I can point to is a diagnostic tool I designed for internal troubleshooting. I started from a recurring problem, that Windows error codes were being reported without any shared understanding of what they meant, and worked backwards to a defined set of inputs, outputs and expected behaviour before writing any code. I then used the tool to trace intermittent server freezes and crashes to missing or corrupted DLLs. At Co-op I introduced documentation that cut incident management time by more than half, which meant agreeing what needed recording, in what format, and for whose benefit before anyone wrote anything down.

I want to be direct about one requirement. Acturis asks for AAB at A-level including an A in Maths. I studied the Indian CBSE curriculum rather than UK A-levels and Maths was not my strongest subject there, so I do not meet that specific bar as written. My degree results are strong, and I am quick with logical and quantitative problems, but I would rather state that plainly than let it be discovered later. On the plus side, I have genuine client-facing experience: I am the first point of contact for 15 colleagues at work and I explain technical requirements to people with no particular interest in them every shift at Co-op.

What attracts me to Acturis is the graduate-first culture and the emphasis on real responsibility early. I would welcome the opportunity to discuss how my analytical and technical background could contribute to your team. Thank you for considering my application.

Kind regards,

Mukund Didwania
