

Application for Trainee Cyber Security Consultant

Dear TSG Recruitment Team,

I am applying for the Trainee Cyber Security Consultant role with the advisory practice in Newcastle upon Tyne. Learning the discipline through real customer delivery on the Cyber Controls service is the route I want, and the structured programme towards a permanent consultant position matches how I intend to build my career.

My technical foundation comes from an MSc in Information Security at Royal Holloway, awarded with Merit, and a BCA in computer applications. I hold CompTIA Security+ and ISC2 Certified in Cybersecurity. My MSc modules covered security management, critical infrastructure security and secure business architectures, which gave me a working grounding in the frameworks your Cyber Controls service draws on. Alongside study I built a phishing analysis prototype that maps findings to MITRE ATT&CK techniques, evidence of the self-directed interest your advert asks for.

The parts of this role that involve assessment, reporting and follow-up are closest to what I already do. At Co-op I conduct weekly store-wide risk assessments and daily compliance checks, maintain the assessment records, identify issues requiring corrective action and follow up until identified risks are addressed. That is a control validation loop in a different setting, and it taught me the discipline of completing repetitive checks to a consistent standard. In my IT support role I manage four to five access requests a day through Active Directory with a clear audit trail, handle account creation, permission changes and deprovisioning, and document findings that colleagues rely on. I write up investigations and maintain records that support audit.

I want to be direct about the gap. I have not delivered customer-facing consulting engagements, and I have not worked with the Microsoft security stack in a commercial service context. What I bring instead is comfort with detail, a habit of documenting evidence properly, and experience explaining requirements to people who have no particular interest in them, which I do every shift at Co-op. I am also used to working with frameworks rather than only tools, having studied ISO 27001, Cyber Essentials, GDPR and the NIST Cybersecurity Framework.

What attracts me to TSG is the employee ownership model and the emphasis on ownership as a working standard. The Ownership Ladder describes following work through every handoff until it lands and bringing solutions rather than problems, which is how I already try to operate. I would welcome the opportunity to discuss how my experience could contribute to the advisory practice. Thank you for considering my application.

Kind regards,

Mukund Didwania
