

Application for Assessed Internship – Information & Digital Technology

Dear Shell Recruitment Team,

I am applying for the Shell Assessed Internship Programme in Information & Digital Technology because it offers the combination of real project responsibility and structured development that I am looking for at this stage of my career. The opportunity to work on a meaningful project with clear deliverables, alongside experienced professionals who provide mentoring and regular assessment, is exactly the environment I need to grow both technically and professionally. I am available for the full programme duration from 15 June 2027 to 4 September 2027.

My background combines practical IT support and security work with formal analytical training. I am an MSc Information Security graduate from Royal Holloway, awarded with Merit, with CompTIA Security+ and ISC2 Certified in Cybersecurity, preceded by a BCA in computer applications. That means I understand not only how to resolve technical problems but how to approach complex challenges in a structured way - which is central to a programme that values analytical thinking, objective decision-making and the ability to come up with original ideas.

In my current IT support position I am the first point of contact for 15 colleagues across 15 to 20 devices, troubleshooting access and system problems, monitoring server health and maintaining network and website-access controls. I handle four to five access requests a day through on-premises Active Directory - verifying business approval, granting time-limited permissions and documenting the access period and any extension - and I investigate four to five suspicious emails a day, recording findings and alerting colleagues to recurring tactics. I also built a local tool that maps Windows error codes to their common causes and used it to trace intermittent server freezes to missing or corrupted DLLs, which is the kind of proactive problem-solving and root-cause analysis Shell values. My technical skills include Python, PowerShell and SQL, which I use for task automation and data analysis.

Two things I want to be straightforward about. I completed my MSc in September 2025, so I am a recent graduate rather than a current penultimate-year student, which is the stated eligibility criterion. I am applying because the programme's structure - real projects, mentoring, formal assessment - aligns with what I am looking for, and I believe my practical experience would allow me to contribute meaningfully from day one. I also have not worked in the energy sector, so that domain knowledge is something I would expect to develop quickly rather than claim as existing experience. What I do bring is a genuine service mindset, attention to detail and the drive to get things done: at Co-op, as Person in Charge, I conduct weekly risk assessments and daily compliance checks, maintain the assessment records, and coordinate seven or eight colleagues per shift while explaining requirements to people who have no particular interest in them.

What draws me to Shell specifically is the purpose to power progress and the culture of inclusion, collaboration and care. The energy sector is undergoing significant transformation, and the opportunity to contribute to that through a structured internship with real responsibility is exactly the kind of challenge I am looking for. I would welcome the opportunity to discuss how my skills and experience could contribute to your team.

Kind regards,

Mukund Didwania
