

Application for Global Technology, Cyber Security, Summer 2027 Analyst

Dear Bank of America Recruitment Team,

I am applying for the Global Technology Cyber Security Summer Analyst programme in Chester. The Global Information Security team protects the data of one of the world's largest financial institutions, and the chance to work on real delivery of security solutions from the first week is the reason I am applying. I can join from June to August 2027 and I have the right to work in the UK.

My technical foundation comes from an MSc in Information Security at Royal Holloway, awarded with Merit, and a BCA in computer applications. I hold CompTIA Security+ and ISC2 Certified in Cybersecurity. Alongside the formal training I have built my own security projects, including a phishing detection tool that maps findings to MITRE ATT&CK techniques and a diagnostic tool that traces Windows error codes to their root causes. This reflects the self-learning outside of studies that your essential criteria asks for.

In my current IT support role I am the first point of contact for 15 colleagues, handling four to five access requests a day through Active Directory and investigating four to five suspicious emails a day. I record my findings and alert colleagues to recurring tactics. I also monitor server health, maintain network and website-access controls, and use Python and PowerShell to automate repetitive checks. This is day-to-day work in vulnerability identification, incident response and access control, which maps directly to the responsibilities in your advert.

What draws me to financial services security is the scale and the stakes. Protecting tens of millions of consumers worldwide means security decisions carry real weight, and I want to learn how a team of that size identifies, prevents and mitigates risk. My background in compliance, risk assessment and documentation means I am comfortable with the process discipline this requires, not only the technical work.

I would welcome the opportunity to discuss how my skills and experience could contribute to your team. Thank you for considering my application.

Kind regards,

Mukund Didwania
