## Professional Summary

Proactive IT Support Assistant combining MSc-level cybersecurity expertise with hands-on administration of Microsoft 365, Microsoft Azure, and Active Directory. A consultative partner adept at context-aware problem solving, delivering secure, business-aligned IT solutions strictly compliant with ISO 27001 standards.

## Technical Skills

**IT Support & Digital Systems:** Microsoft 365, IT Systems Administration, Network Troubleshooting, Windows 11, MacOS, iOS, Android, Endpoint Management (Microsoft Intune), Hardware Provisioning, SharePoint, Power Automate.  
**Cyber Security & Cloud Platforms:** Microsoft Azure, Microsoft Entra ID, Identity & Access Management (IAM), Active Directory, Threat Detection, Log Analysis, Incident Management, BitLocker.  
**Data Analysis & Software Development:** Data Analysis, SQL, Python (Pandas), Microsoft Power BI, Microsoft Excel, Software Development, System Testing, API Integration.  
**Frameworks & Compliance:** ISO 27001/27002, UK Cyber Essentials, NIST CSF, DPA/GDPR.

## Education

**MSc Information Security**, Royal Holloway University of London, United Kingdom  
September 2024 - September 2025 | Merit

**Modules:** Cryptography, Security Management (ISO 27001 focus), Critical Infrastructure Security, Secure Business Architectures, Digital Forensics and Network Security.

**Bachelor of Computer Applications**, Maharashtra Institute of Technology World Peace University, India  
September 2021 – September 2024 | CGPA: 9.17

**Modules:** Python, Java, JavaScript, C++, C, MySQL, AI & ML, Angular, Mobile Application Development.

## Work Experience

**IT Support Assistant**, The Colourful Aura | London, UK | November 2024 - Present

- Delivered IT support across Windows, macOS and mobile devices, troubleshooting Microsoft 365, Azure, network connectivity and hardware/software issues to minimise user downtime and maintain business continuity.
- Produced and maintained 40+ internal operational documents supporting system changes, audit readiness and knowledge sharing across the organisation.
- Delivered AV and Microsoft Teams support for 10–15 weekly cross-functional meetings while training staff on digital tools and secure working practices, improving technology adoption across the organisation.

**Assistant Systems Engineer**, Apollo Clinic, Basti, India | January 2024 - September 2024

- Coordinated deployment of secure IT infrastructure across 20+ external vendors, translating clinical requirements into technical solutions that delivered compliant systems on time and within budget.
- Protected sensitive patient information across 100% of clinical endpoints by implementing network segmentation, firewall policies and BitLocker encryption, strengthening regulatory compliance and reducing endpoint security risk.
- Managed corporate data systems utilizing SQL for database administration, analyzing corporate data and system logs to inform technical decision-making and ensure operational efficiency.

## Projects

**SafePaste** - Browser Privacy Extension

JavaScript, Manifest V3, HTML, CSS, Regular Expressions

- Developed a browser-wide Chrome Extension achieving a 93.7% detection rate across 150+ real-world test cases using 25+ deterministic detection patterns.
- Engineered a privacy-first client-side detection engine using JavaScript and regular expressions to identify emails, Passwords, API keys, JWTs and other sensitive patterns locally, eliminating the need to transmit user data to external services

**InboxDefender** – AI-Powered Phishing Intelligence Platform (Current Project)

Python, Gmail API, LLM, MITRE ATT&CK, JSON

- Reduced phishing triage time by 35% by automating email ingestion and analysis with Python and Gmail APIs, enabling faster identification and prioritization of suspicious emails.
- Applied AI models to map email content against the MITRE ATT&CK framework, producing structured threat intelligence that improved investigation quality and supported faster incident response.
- Engineered an automated phishing analysis pipeline that processed 450+ real-world phishing emails, reducing analyst triage time by 35% through automated threat enrichment.

**AttackSurfaceIQ** – Risk Assessment

Python, Windows Event Logs, Network Analysis, PowerShell

- Reduced the attack surface across 15+ endpoints by analyzing network traffic and Windows event logs to identify unnecessary services, strengthening endpoint security and reducing potential exploitation paths.
- Investigated anomalous system activity and historical event logs to identify potential security incidents, supporting root cause analysis, forensic investigations and system recovery.

## Certifications

ISC2 Certified in Cybersecurity (CC)

Ethical Hacking with Kali Linux, IBM

Cyber Security Job Simulation, Deloitte & Mastercard via Forage

CompTia Security+ (In Progress)
