

Application for Security Engineer Intern - Summer 2027

Dear DV Trading Recruitment Team,

I am applying for the Security Engineer Intern position in London for summer 2027. Getting hands-on exposure to a real trading firm's security programme, with scoped projects across operations, detection and risk, is exactly the kind of grounding I am looking for before settling into a specialism.

My background combines security training with day-to-day operational work. I hold an MSc in Information Security from Royal Holloway, awarded with Merit, and a BCA in computer applications, along with CompTIA Security+ and ISC2 Certified in Cybersecurity. My MSc covered digital forensics, network security, critical infrastructure security and secure business architectures, which gave me the conceptual grounding for detection and risk work.

In my current IT support role I already triage and document security events. I investigate four to five suspicious emails daily, checking sender and link domains for impersonation, documenting findings and alerting colleagues to recurring phishing tactics. I manage four to five access requests a day through Active Directory with a clear audit trail. Outside work I built a phishing analysis prototype that maps findings to MITRE ATT&CK techniques, where I refined detection rules through manual testing specifically to reduce false positives. That tuning work is the closest thing I have to what your advert describes under maintaining security tooling. I also built a diagnostic tool that traces Windows error codes to root causes, which I used to identify missing and corrupted DLLs behind intermittent server freezes.

I want to be direct about where I would be starting. Your advert asks for candidates currently pursuing a degree. I completed my MSc in 2025, so I am not currently enrolled, and I would rather state that than have it discovered later. I have not worked with a commercial SIEM or enterprise security tooling, and my scripting is at a practical rather than advanced level. What I do bring is working familiarity with Windows and Linux, networking fundamentals from my MSc, Python and PowerShell for automation, and a habit of following technical problems to a real root cause rather than a symptom.

What attracts me to DV Trading is the scale and pace of a proprietary trading environment, where security decisions affect live operations rather than a static system. I would welcome the opportunity to discuss how my experience could contribute to your security team. Thank you for considering my application.

Kind regards,

Mukund Didwania
