

Application for Technology Cyber and Security Summer Internship

Dear Barclays Recruitment Team,

I am applying for the Technology Cyber and Security Summer Internship at Barclays because it offers the combination of real project responsibility and structured development that I am looking for at this stage of my career. The opportunity to support the Chief Security Office, work on meaningful projects with clear deliverables, and learn from experienced professionals who provide mentoring and regular assessment is exactly the environment I need to grow both technically and professionally. I am available for the full programme duration from June 2027 to August 2027.

My background combines practical IT support and security work with formal analytical training. I am an MSc Information Security graduate from Royal Holloway, awarded with Merit, with CompTIA Security+ and ISC2 Certified in Cybersecurity, preceded by a BCA in computer applications. That means I understand not only how to resolve technical problems but how to approach complex challenges in a structured way, which is central to a role that requires strong problem-solving skills and the drive to deliver innovative solutions in a financial services environment.

In my current IT support position I am the first point of contact for 15 colleagues across 15 to 20 devices, troubleshooting access and system problems, monitoring server health and maintaining network and website-access controls. I handle four to five access requests a day through on-premises Active Directory, verifying business approval, granting time-limited permissions and documenting the access period and any extension. I investigate four to five suspicious emails a day, recording findings and alerting colleagues to recurring tactics. I also built a local tool that maps Windows error codes to their common causes and used it to trace intermittent server freezes to missing or corrupted DLLs, which is the kind of proactive problem-solving and root-cause analysis Barclays values. My technical skills include Python, PowerShell and SQL, which I use for task automation and data analysis.

Two things I want to be straightforward about. I completed my MSc in September 2025, so I am a recent graduate rather than a current penultimate-year student graduating in 2028, which is the stated eligibility criterion. I am applying because the programme's structure, real projects, mentoring and formal assessment, aligns with what I am looking for, and I believe my practical experience would allow me to contribute meaningfully from day one. I also have not worked in financial services, so that domain knowledge is something I would expect to develop quickly rather than claim as existing experience. What I do bring is a genuine service mindset, attention to detail and the drive to get things done. At Co-op, as Person in Charge, I conduct weekly risk assessments and daily compliance checks, maintain the assessment records, and coordinate seven or eight colleagues per shift while explaining requirements to people who have no particular interest in them.

What draws me to Barclays specifically is the purpose of working together for a better financial future and the values of Respect, Integrity, Service, Excellence and Stewardship. The opportunity to contribute to work that protects customers and colleagues across a global bank is exactly the kind of challenge I am looking for. I would welcome the opportunity to discuss how my skills and experience could contribute to your team.

Kind regards,

Mukund Didwania
