Professional Summary

MSc Information Security graduate with hands-on IT support experience across Windows, Microsoft 365 and endpoint troubleshooting. CompTIA Security+ and ISC2 CC certified, with practical exposure to Python, PowerShell, SQL and log analysis, and a strong interest in trading technology and production support.

Technical Skills

Security Analysis: Phishing analysis, Windows Event Logs, network analysis, MITRE ATT&CK
Systems & Support: Windows, Microsoft 365, Azure, account administration, endpoint configuration
Scripting & Automation: Python, PowerShell, SQL, API integration
Security Controls: BitLocker, network segmentation, endpoint security
Framework Familiarity: ISO 27001, Cyber Essentials, GDPR, NIST CSF
Communication & Support: User support, technical documentation, stakeholder coordination

Education

MSc Information Security, Royal Holloway University of London, United Kingdom
September 2024 - September 2025 | Merit
Modules: Cryptography, Security Management, Critical Infrastructure Security,
Secure Business Architectures, Digital Forensics and Network Security.

Bachelor of Computer Applications, Maharashtra Institute of Technology World Peace University, India
September 2021 – September 2024 | CGPA: 9.17
Modules: Python, Java, JavaScript, C++, C, MySQL, AI & ML, Angular, Mobile Application Development.

Work Experience

IT Support Assistant, The Colourful Aura | London, UK | November 2024 - Present
- Manage typically 4–5 access requests daily through on-premises Active Directory, verifying business approval, granting time-limited permissions and documenting access periods and extensions.
- Investigate 4–5 suspicious emails daily, checking sender and link domains for impersonation, documenting findings and alerting colleagues to recurring phishing tactics.
- Serve as the first point of contact for IT issues for 15 employees across 15–20 devices, troubleshooting access and system problems, monitoring server health and maintaining password and website-access controls.

Person in Charge (PIC), The Co-operative Group | Fenchurch Street London, UK | November 2025 - Present
- Conduct weekly store-wide risk assessments and daily compliance checks, reviewing operational controls, maintaining assessment records and identifying issues requiring corrective action.
- Handle 15+ operational issues weekly, including product-date exceptions and safety concerns; document incidents through internal reporting systems, apply temporary controls and escalate unresolved risks.
- Coordinate 7–8 colleagues per shift, communicating control requirements, assigning corrective actions and following up to ensure identified risks are addressed.

Projects

SafePaste - Sensitive Data Detection Browser Extension
JavaScript, Manifest V3, HTML, CSS, Regular Expressions
- Built a Chrome extension using 25+ detection patterns to warn users about potential exposure of email addresses, credentials and API keys before submitting pasted content.
- Achieved 93.7% accuracy across 150+ manual test cases, including checks for false positives; kept all detection local to the browser to protect sensitive content.
- Refined detection rules through manual testing to reduce false positives, while allowing users to review flagged content and choose whether to proceed.

InboxDefender – Phishing Analysis
Python, Gmail API, LLM, MITRE ATT&CK, JSON
- Designed and developed a phishing-analysis prototype to highlight suspicious email indicators and support manual triage, with design reviews from an experienced SOC analyst.
- Evaluated the prototype using a mixture of suspicious and legitimate business emails, keeping sensitive email data local and using hardcoded MITRE ATT&CK mappings to contextualise findings.
- Developing sandbox-based URL analysis to inspect linked content and enrich investigation reports, while keeping sensitive email data local.

AttackSurfaceIQ – Windows Event Log Analysis
Python, Windows Event Logs, Network Analysis, PowerShell
- Developed a local tool that maps Windows error codes to common causes, supporting investigation of system faults across business devices.
- Used the tool to investigate intermittent server freezes and crashes, identifying errors associated with missing or corrupted DLLs and informing corrective action.
- Designed the tool for internal troubleshooting, keeping log analysis local; currently developing background monitoring and automated alerts for unexpected errors.

Certifications

- CompTIA Security+
- ISC2 Certified in Cybersecurity (CC)
- Ethical Hacking with Kali Linux, IBM
- Cyber Security Job Simulation, Deloitte & Mastercard via Forage
